Over forty years ago a commercial ran on TV for the Remington electric shaver done by the owner. He said he ditched his old razor for the new shaver, and he liked it so much he bought the company.

Not quite that long ago, I came upon an incredible technology myself. It had historic roots and as there was no company to buy, I started one. Digging deep into the old technology to improve it, I patented the new, and now I want to tell the world about it. In a sense, this is my commercial.

Several years ago, I was diagnosed with stage 4 COPD and end stage Emphysema. Today I am not on any form of supplemental oxygen or additional medications. I give credit to this invention.

Seeing how good I am doing without medication and amazed at my existence without oxygen, my pulmonologist has referred several of his own pulmonology patients to a clinic I started which is solely dedicated to using the PL2020, which is the name of the device that has given me a new lease on life.

My intent in all of this is to make this device and its proprietary procedure available on a wider scale so other individuals can get a shot at really overcoming a disease instead of just maintaining it.

The PL2020 is a PhotoLuminescence device that to me is like magic, but then I am biased. However, it does seem to prove itself all the time, as it also does at our Medical Director's clinic in Beloit, Wisconsin. With the Wisconsin clinic and our company's own in Raleigh, North Carolina, we are documenting and proving the efficacy of the system and what it does for patients regularly.

Some of the issues I have seen helped at a very high rate are chronic fatigue, skin conditions, and foggy brain. Others showing great results are Lyme, Fibromyalgia, almost all STD's, Psoriasis, Eczema, cysts, most tumors, speedy healing after surgery, and a number of other things we have identified and listed in our research sheets.

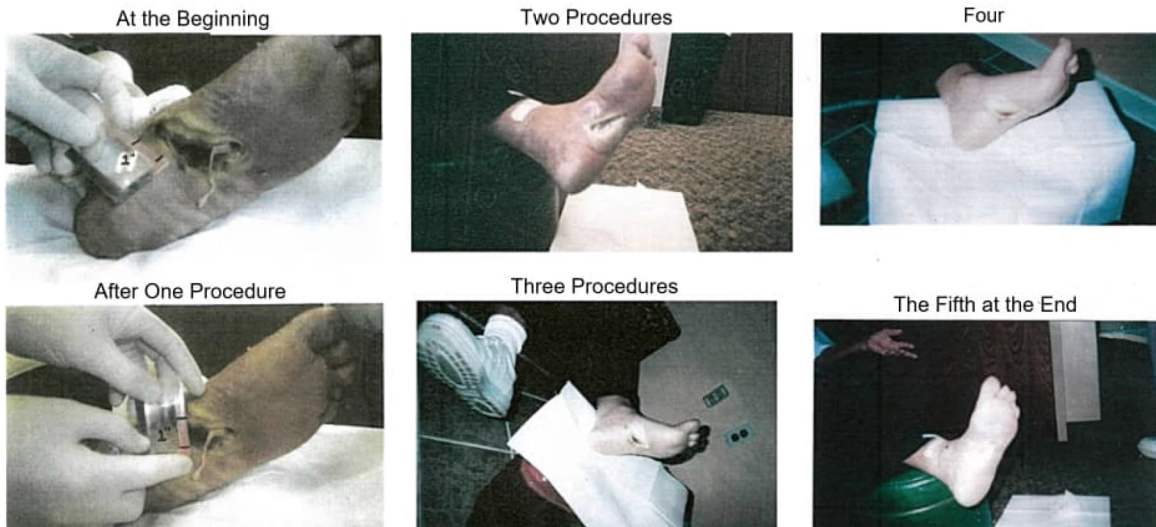

We have noted that PL2020 sessions provide cancer patients much relief from their chemo and radiation therapies, and we have seen it greatly assist in helping the body clear itself of other problems. We have proof and photos, and I have put a few of these after this page to show you a bit of what we are seeing with our procedure and technology.

Disclaimer: I need to tell you that the PL2020, as BioPhotonic Therapy, is just using photons of light to do what it does, which seemingly assists the body's own oxygenation and innate immune system to fire up at a higher level. There is no chemical involvement at all. Just light. And that is what I find magical. Support nature and nature heals.

Where the medical field often promotes the double-blind placebo study to determine the efficacy of any given treatment before allowing acceptance, you should note that the following pictures reflect anecdotal evidence only. For the individuals helped, I don't think they cared.

Taking Care of a Diabetic Lesion

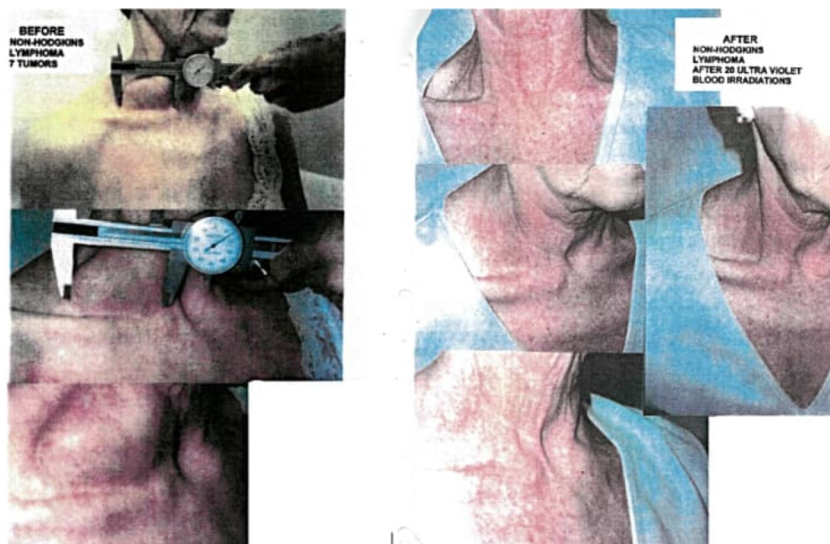

Diabetic Male Open Wound 2" X 4 1/2" X 1 1/4" deep.
Wick to help drain. Gangrene toes – Foot to be amputated in 3 days.

MRSA

Non-Hodgkin's Lymphoma

Plastic Surgery Patient Sees Recovery in Days

Right after Surgery

Four Days Later

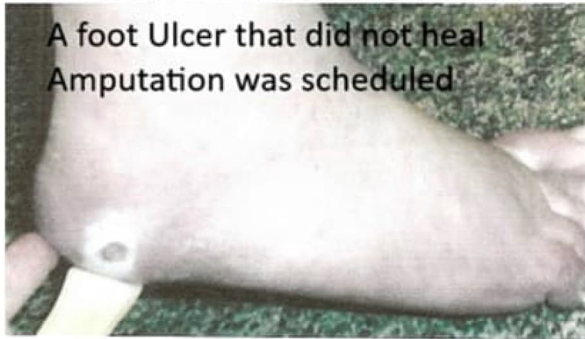

One Week Post Surgery

**Psoriasis Patient after 4 procedures.
All cleared up after a decade of taking
medications with no results.**

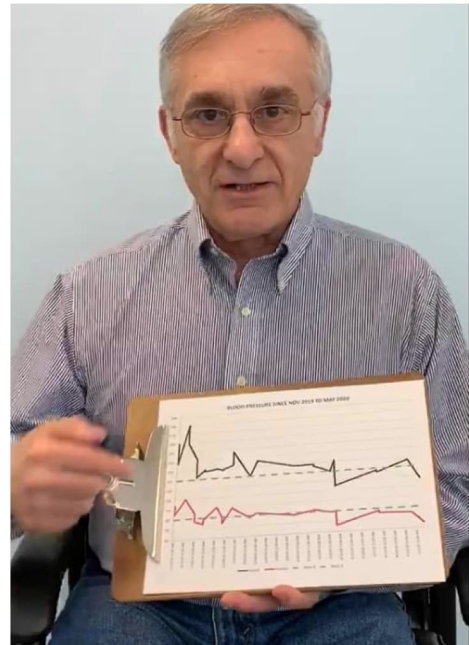

ANOTHER NON-HEALING FOOT ULCER

**A foot Ulcer that did not heal
Amputation was scheduled**

After 3 procedures, healed up!

**High blood pressure resolved, also
after a decade of medication.**

Kidney Failure
Was going to have to initiate Dialysis, but downgraded to
Stage 2 within 3 procedures.

It is my wish that more clinics will get involved in using this technology and help us in documenting results like these so at some point, it can all be directed to extend our current FDA filing to a higher level so this simple and safe procedure can see far wider medical acceptance.

With the current health care system in crisis and seeing never-ending spiraling costs, the time is now for such a health supporting technology to come on line and help those in need.

I am hoping you can join us and be a part of our extended family and team to make a real difference in the health of many.
